- Technical Implementation** 03
- App Demostration** 04

Problem

- **Lack of Accessible Tools:** Many people do not have easy access to tools for daily health tracking and understanding symptoms or natural remedies.
- **Need for Nearby Medical Assistance:** Users often struggle to find nearby hospitals, clinics, or doctors in times of need.
- **Limitations of Existing Apps:** Most current apps focus only on either fitness or symptoms, not both, leading to incomplete health support.
- **Market Gap :**Few platforms offer regional language support, age-specific diet plans, or solutions for chronic care needs.
- **App Goal:** The app is designed to provide daily health tips, symptom insights, and holistic wellness support to users.
- **Strong Demand:** Surveys indicate a growing need for a multilingual, AI-powered health solution, especially after the pandemic.

Solution

- **Daily Health Tracking:** Tracks sleep, water intake, steps, mood, and symptoms for overall wellness monitoring.
- **Symptom Insights:** Offers simple, non-diagnostic explanations to promote early health awareness.
- **Personalized Diet Plans:** Provides age-based diet suggestions tailored to the user's profile.
- **Daily Health Tips:** Shares helpful wellness tips based on user habits and health data.
- **Natural Remedies:** Suggests simple solutions using easily available household ingredients.
- **Support for Dialysis Patients:** Sends timely reminders and safety alerts for managing dialysis schedules.
